

Your competent and reliable partner for IT solutions around SAP

We have accompanied numerous projects during the introduction and further development of SAP. We are happy to make the experience gained in these projects available to your company. Our service spectrum ranges from the conception and planning of the architecture to the implementation of individual solutions for your processes.

UDI data transmission

➔ To GUDID or EUDAMED

One of the challenges in implementing the requirements of the FDA or the European Union is to transmit the UDI data to the authorities in the correct format.

As a technology company we offer a Software as a Service (SaaS) solution, which takes over this task for you. As a customer you have the following options:

Send UDI data as Excel file

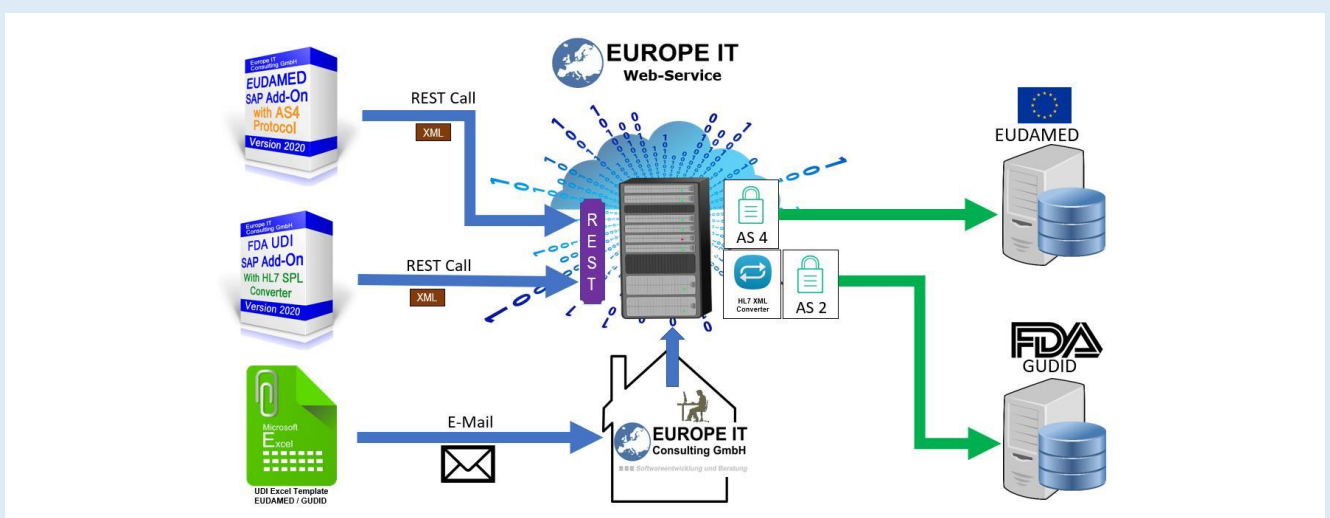

Send us your UDI data in an Excel file. For this purpose, we will first provide you with an Excel template in which you can maintain your data. We transform the data into the appropriate format and upload it to the database for you. To transfer the data to the GUDID, it is first transformed into the required HL7 SPL XML format.

Data transfer with the UDI Add-On for SAP

If you already use our UDI SAP Add-On (for FDA or EUDAMED) to manage your medical device master data, you can use data export and simultaneous upload to our cloud server directly from your ERP system. Through a RESTFull WebService you receive direct confirmation of the successful upload to our Cloud Server. The UDI add-on then automatically queries the status of the data transfer as well as the status on the authorities database in the background, so that you are always up to date.

If you have any questions, please do not hesitate to contact us. We will be happy to help you.
